Featuring: **Heil's PowerTrak Commercial**

The Heil PT Commercial is a High-Compaction Rear Loader that offers high-pressure hydraulics and dual-track design to provide an **awesome compaction of up to 1,200 lbs per yard**. The PowerTrak 3.64 yd hopper handles construction, demolition, and bulk waste better than any commercial rear loader in its class. Heil has traditionally low maint costs, minimal downtime, overall on-the-job efficiency, longevity, and high trade-in value – which offers **best return on investment in the industry**.

### PT Commercial features

**Dual-Track System** – gives the top cylinder its own track, significantly reducing the angle of resistance. This **reduces friction and improves cycle times because more pressure is exerted directly onto the load**, getting incredibly long life from the aluminum/bronze alloy slide shoes.

**Compaction Rate** – of up to 1,200 pounds per cubic yard. Cycle times as low as 21 seconds. A 7- to 9-second reloading time.

**Twice the life** – the cast alloy ejector shoes are easy to service and can be changed without removing the ejector panel, and the shoes are reversible for twice the life.

**Flexibility** – loading sill height is 4-1/2 inches below the chassis frame rails, which **makes it popular for both residential and commercial use**.

**Lower overall weight** – high-tensile strength steel construction delivers maximum life with lower overall body weight for better payloads and less stress on chassis components.
